

Speech and Brain-Mechanisms

SPEECH ALTERATIONS FROM ELECTRICAL INTERFERENCE

The electric current has been applied to the cortex while the patient was reading or writing. The number of such tests has been too few for general conclusions. It may be stated, however, that alterations in reading and writing have occurred when the elec-

DISTORTION AND REPETITION OF WORDS AND SYLLABLES

FIG. VIII-6. Distortion and repetition of words and syllables was noted when the electrode was placed at these points. Distortion differs from slurring in that the distorted sound is unrecognizable as a word.

trode has been applied to anterior and superior as well as posterior speech areas.

The location of the points of electrical interference of the left hemisphere producing the eight different types of response are seen in the various figures. The last six types are classified as aphasic
